Containerised Compressed Air Package

mb air systems recently completed a small containerised project.

Utilising Ingersoll Rand's Variable Speed "Nirvana" R Series Compressors and modular desiccant dryers, this containerised package has the capability to provide a variable compressed air output from 0-14.5m³/min at a working pressure of 8 Bar, providing air quality to ISO 8573-1:2010 Class 2.2.2.

Also within the container there are two air receivers, for wet & dry storage.

The air is primarily used for pneumatic actuation and purging of sensors at a port based silo storage facility.

For more information on our compressed air packaging capabilities, please contact us.
